

Step motor 5V

Function Description:

The motor can be used in conjunction with the learning board sold by our shop. It adopts ULN2003 drive, which is very easy to use.

Quality stepping motor equipped with gear reduction. It is of low noise and stable operation.

It can be driven under 5V/12V, which is very convenient to use for microcontroller developers.

Suitable for 51/AVR/AVR/ARM and other microcontroller platform and a must for robot designers and developers.
