

## The Linear IC's Three-Terminal Low Current Positive Voltage Regulators

### DESCRIPTION

The 78L00A Series of three terminal positive voltage regulators is available with several fixed output voltages making them useful in a wide range of applications. These regulators are inexpensive, vise-to-use devices suitable for a multitude of applications that require a regulated supply of up to 100 mA. These regulators feature internal current limiting and thermal shutdown making them remarkably rugged. No external components are required with the 78L00A devices in many applications.

These devices offer a substantial performance advantage over the traditional zener diode-resistor combination, as output impedance and quiescent current are substantially reduced.

The voltages available allow the 78L00A to be used in logic systems, instrumentation, HiFi, and other solid state electronic equipment.

The 78L00A is available in 3-Pin plastic package SOT54 (Z), 3-Pin mini power plastic package SOT89 (F) and the 8-Pin plastic package SO8 (D) offers superior quality and performance at low cost.

### FEATURES

- High Output Current  
 $I_o = 100 \text{ mA}$
- Fixed Output Voltage  
 $V_o = 5 \text{ V}, 6 \text{ V}, 8 \text{ V}, 12 \text{ V}, 15 \text{ V}$
- Complementary Negative Regulators 79L00A Series
- Available in either  $\pm 5\%$  (AC) Selection
