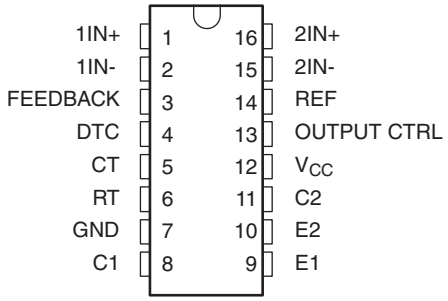
TL594
PULSE-WIDTH-MODULATION CONTROL CIRCUIT

SLVS052G – APRIL 1988 – REVISED JANUARY 2007

FEATURES

- **Complete PWM Power-Control Circuitry**
- **Uncommitted Outputs for 200-mA Sink or Source Current**
- **Output Control Selects Single-Ended or Push-Pull Operation**
- **Internal Circuitry Prohibits Double Pulse at Either Output**
- **Variable Dead Time Provides Control Over Total Range**
- **Internal Regulator Provides a Stable 5-V Reference Supply Trimmed to 1%**
- **Circuit Architecture Allows Easy Synchronization**
- **Undervoltage Lockout for Low-V_{CC} Conditions**

D, N, NS, OR PW PACKAGE
(TOP VIEW)



DESCRIPTION/ORDERING INFORMATION

The TL594 incorporates all the functions required in the construction of a pulse-width-modulation (PWM) control circuit on a single chip. Designed primarily for power-supply control, this device offers the systems engineer the flexibility to tailor the power-supply control circuitry to a specific application.

The TL594 contains two error amplifiers, an on-chip adjustable oscillator, a dead-time control (DTC) comparator, a pulse-steering control flip-flop, a 5-V regulator with a precision of 1%, an undervoltage lockout control circuit, and output control circuitry.

The error amplifiers have a common-mode voltage range of –0.3 V to V_{CC} – 2 V. The DTC comparator has a fixed offset that provides approximately 5% dead time. The on-chip oscillator can be bypassed by terminating RT to the reference output and providing a sawtooth input to CT, or it can be used to drive the common circuitry in synchronous multiple-rail power supplies.

The uncommitted output transistors provide either common-emitter or emitter-follower output capability. Each device provides for push-pull or single-ended output operation, with selection by means of the output-control function. The architecture of these devices prohibits the possibility of either output being pulsed twice during push-pull operation. The undervoltage lockout control circuit locks the outputs off until the internal circuitry is operational.

The TL594C is characterized for operation from 0°C to 70°C. The TL594I is characterized for operation from –40°C to 85°C.

ORDERING INFORMATION(1)

T_A	PACKAGE(2)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
0°C to 70°C	PDIP – N	Tube of 25	TL594CN	TL594CN
	SOIC – D	Tube of 40	TL594CD	TL594C
		Reel of 2500	TL594CDR	
	SOP – NS	Reel of 2000	TL594CNSR	TL594
	TSSOP – PW	Tube of 90	TL594CPW	T594
		Reel of 2000	TL594CPWR	
–40°C to 85°C	PDIP – N	Tube of 25	TL594IN	TL594IN

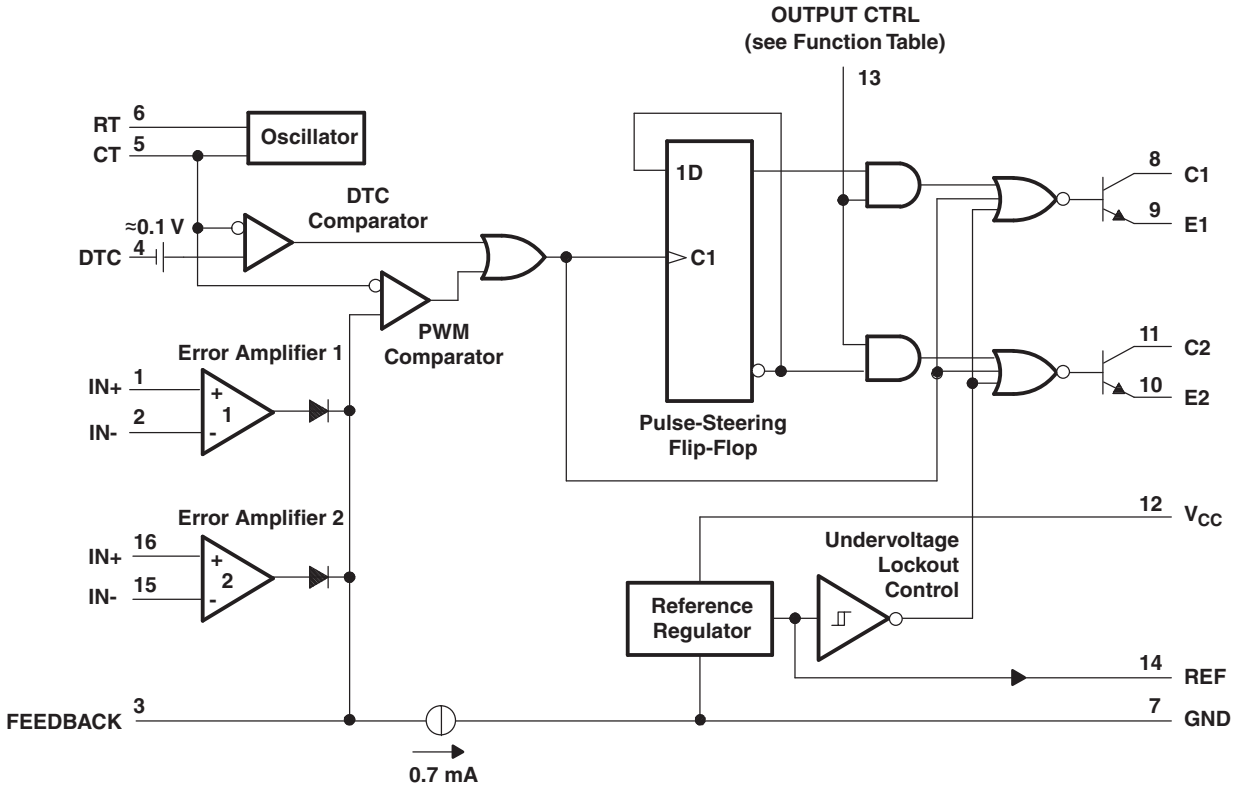
		Reel of 2000	TL594IPWR	

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
(2) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

FUNCTION TABLE

INPUT OUTPUT CTRL	OUTPUT FUNCTION
V_I = 0	Single-ended or parallel output
$V_I = V_{ref}$	Normal push-pull operation

FUNCTIONAL BLOCK DIAGRAM



ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

			VALUE	UNIT
V_{CC}	Supply voltage(2)		41	V
	Amplifier input voltage		V_{CC} + 0.3	V
	Collector output voltage		41	V
	Collector output current		250	mA
θ_{JA}	Package thermal impedance(3)(4)	D package	73	°C/W
		N package	67	
		NS package	64	
		PW package	108	
T_J	Operating virtual junction temperature		150	°C
T_{stg}	Storage temperature range		–65 to 150	°C

(1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential voltages, are with respect to the network ground terminal.
(3) Maximum power dissipation is a function of $T_J(max)$, θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) – T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS

			MIN	MAX	UNIT
V_{CC}	Supply voltage		7	40	V
V_I	Amplifier input voltage		–0.3	V_{CC} – 2	V
V_O	Collector output voltage			40	V
	Collector output current (each transistor)			200	mA
	Current into FEEDBACK terminal			0.3	mA
C_T	Timing capacitor		0.47	10000	nF
R_T	Timing resistor		1.8	500	kΩ
f_{osc}	Oscillator frequency		1	300	kHz
T_A	Operating free-air temperature	TL594C	0	70	°C
		TL594I	–40	85	

ELECTRICAL CHARACTERISTICS

V_{CC} = 15 V, over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS(1)	MIN	TYP(2)	MAX	UNIT
Reference Section					
Output voltage (REF)	I_O = 1 mA, T_A = 25°C	4.95	5	5.05	V
Input regulation	V_{CC} = 7 V to 40 V, T_A = 25°C		2	25	mV
Output regulation	I_O = 1 mA to 10 mA, T_A = 25°C		14	35	mV
Output-voltage change with temperature	ΔT_A = MIN to MAX		2	10	mV/V
Short-circuit output current(3)	V_{ref} = 0	10	35	50	mA
Amplifier Section (see Figure 1)					
Input offset voltage, error amplifier	FEEDBACK = 2.5 V		2	10	mV
Input offset current	FEEDBACK = 2.5 V		25	250	nA
Input bias current	FEEDBACK = 2.5 V		0.2	1	µA
Common-mode input voltage range, error amplifier	V_{CC} = 7 V to 40 V	0.3 to V_{CC} – 2			V
Open-loop voltage amplification, error amplifier	ΔV_O = 3 V, R_L = 2 kΩ, V_O = 0.5 V to 3.5 V	70	95		dB
Unity-gain bandwidth	V_O = 0.5 V to 3.5 V, R_L = 2 kΩ		800		kHz
Common-mode rejection ratio, error amplifier	V_{CC} = 40 V, T_A = 25°C	65	80		dB
Output sink current, FEEDBACK	V_{ID} = –15 mV to –5 V, FEEDBACK = 0.5 V	0.3	0.7		mA
Output source current, FEEDBACK	V_{ID} = 15 mV to 5 V, FEEDBACK = 3.5 V	–2			mA
Oscillator Section, C_T = 0.01 µF, R_T = 12 kΩ (see Figure 2)					
Frequency			10		kHz
Standard deviation of frequency(4)	All values of V_{CC}, C_T, R_T, and T_A constant		100		Hz/kHz
Frequency change with voltage	V_{CC} = 7 V to 40 V, T_A = 25°C		1		Hz/kHz
Frequency change with temperature(5)	ΔT_A = MIN to MAX			50	Hz/kHz
Dead-Time Control Section (see Figure 2)					
Input bias current	V_I = 0 to 5.25 V		–2	–10	µA
Maximum duty cycle, each output	DTC = 0 V	0.45			
Input threshold voltage	Zero duty cycle		3	3.3	V
	Maximum duty cycle	0			
Output Section					
Collector off-state current	V_C = 40 V, V_E = 0 V, V_{CC} = 40 V		2	100	µA
	DTC and OUTPUT CTRL = 0 V, V_C = 15 V, V_E = 0 V, V_{CC} = 1 V to 3 V		4	200	
Emitter off-state current	V_{CC} = V_C = 40 V, V_E = 0			–100	µA
Collector-emitter saturation voltage	Common emitter, V_E = 0, I_C = 200 mA		1.1	1.3	V
	Emitter follower, V_C = 15 V, I_E = –200 mA		1.5	2.5	
Output control input current	V_I = V_{ref}			3.5	mA

(1) For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.
(2) All typical values, except for parameter changes with temperature, are at T_A = 25°C.
(3) Duration of the short circuit should not exceed one second.
(4) Standard deviation is a measure of the statistical distribution about the mean, as derived from the formula:

$$\sigma = \sqrt{\frac{\sum_{n=1}^{N} (x_n - \overline{X})^2}{N - 1}}$$

(5) Temperature coefficient of timing capacitor and timing resistor is not taken into account.

ELECTRICAL CHARACTERISTICS (continued)

V_{CC} = 15 V, over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS(1)		MIN	TYP(2)	MAX	UNIT
PWM Comparator Section (see Figure 2)						
Input threshold voltage, FEEDBACK	Zero duty cycle			4	4.5	V
Input sink current, FEEDBACK	FEEDBACK = 0.5 V		0.3	0.7		mA
Undervoltage Lockout Section (see Figure 2)						
Threshold voltage	T_A = 25°C				6	V
	ΔT_A = MIN to MAX		3.5		6.9	
Hysteresis(6)			100			mV
Overall Device						
Standby supply current	R_T at V_{ref}, All other inputs and outputs open	V_{CC} = 15 V		9	15	mA
		V_{CC} = 40 V		11	18	
Average supply current	DTC = 2 V, See Figure 2			12.4		mA

(6) Hysteresis is the difference between the positive-going input threshold voltage and the negative-going input threshold voltage.

SWITCHING CHARACTERISTICS

V_{CC} = 15 V, T_A = 25°C, over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Output-voltage rise time	Common-emitter configuration (see Figure 3)		100	200	ns
Output-voltage fall time			30	100	ns
Output-voltage rise time	Emitter-follower configuration (see Figure 4)		200	400	ns
Output-voltage fall time			45	100	ns

AMPLIFIER VOLTAGE AMPLIFICATION vs FREQUENCY

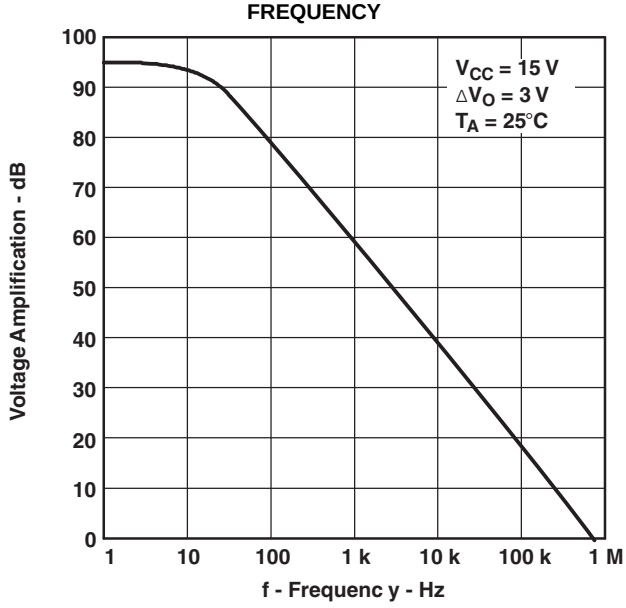

Figure 6.

APPLICATION INFORMATION

How to Set Dead Time

The primary function of the dead-time control is to control the minimum off time of the output of the TL594. The dead-time control input provides control from 5% to 100% dead time. The TL594 can be tailored to the specific power transistor switches that are used, to ensure that the output transistors never experience a common on-time. The bias circuit for the basic function is shown in Figure 7.

$T_D = R_T C_T(0.05 + 0.35R2)$
R2 in kΩ
R1 + R2 = 5 kΩ

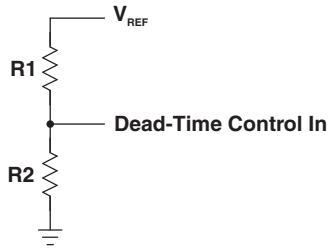

Figure 7. Setting Dead Time

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
